

UI/UX Internship | Project 1: The Empathy Map

Organization: DecodeLabs

Intern: Sajja Nasaruddin

Topic: Fitness Solution for Time-Poor Professionals

1. The Strategic Briefing

The Problem: The 'Enemy' is Time.

Target Audience: Busy office professionals working 40+ hours a week.

Current State: Users perceive they have zero minutes available for health due to back-to-back meetings and commute exhaustion.

The Mission: Move beyond aesthetics to behavioral solutions. Solve for the user who cannot leave their desk.

2. User Persona: The Dossier

Name: Sarah J.

Age Range: 25–40

Occupation: Corporate Professional

Core Goal: Stress relief and mental clarity.

Barriers: Exhaustion from long work hours.

Tech Literacy: High but impatient.

Reality: At 6:00 PM, energy is at 10%.

3. The Empathy Architecture

SAYS: I'm too busy to hit the gym.

I'll start next Monday.

DOES: Drinks coffee, skips breaks, sits 8–10 hours.

THINKS: Feels unhealthy and behind peers.

FEELS: Guilt, burnout, stiffness.

4. Proposed Solution: Micro-Workouts

5-minute exercises between meetings.

Seated stretches, no equipment needed.

Posture correction alerts.

5. Conclusion

Fitness should be invisible and frictionless within a 40-hour work week.
